OVERVIEW

ATMIT Purchase Management module is a powerful tool to track and create your purchases from the quotation to the invoice. It enables you to manage your suppliers' information, controls your products' reception process and check suppliers' invoices.

This module carries out complex purchasing procedures and allows you to easily request services.

GENERAL FEATURES

Web Based	More secure connection using SSL protocol
Multi-Language: Arabic, English & Others	Multi-Currency
Multi-Company & Branches	User Friendly

PURCHASING MANAGEMENT SYSTEM FEATURES

- Ability to request a quotation with all the information needed in addition to the shipment, payment, and packaging information.
- Ability to easily search and import materials from your sales orders to your purchase quotation.
- Streamline the quotation with the material category and product's specifications: width, color, weight, discount, net price...
- Monitoring invoices and tracking the receipt of ordered goods.
- Providing critical information for the Annual Purchase Forecast to improve your future purchasing decision.
- Segmenting Geographical Areas: suppliers in a specific area are grouped under the responsibility of one or group of employees. Segmentation can be done by suppliers/ clients, material category and product category. This configuration is reflected to the XRM (module Relationship Management).
- Reporting transactions can be done according to the filters narrowing your searched report and making it more specific (date, country, materials...).
- Tracking Orders and Invoices: to track each invoice from which order it is generated.
- The ability to view the number of orders that have been generated from a specific quotation.
- Comparing Transactions: viewing details of materials, source of purchase, quantity purchased, ordered and invoiced.
- The ability to filter invoices by type, payment methods, supplier, warehouse...
- Capacity of Tracking Materials' Movement: most and least purchased material.
- Comparing the Purchased Materials' Prices: highest and lowest price by supplier.
- Evaluating the performance of the procurement executives.
- The Module can be linked to Accounting, XRM and Manufacturing Modules in Atmit Enterprise.
